

**FOR A NEW BREAKTHROUGH IN
LOW-COST MECL* CIRCUITS**

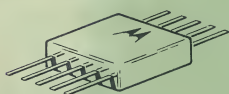

THINK MOTOROLA

**FOR HIGH-SPEED CURRENT MODE DESIGNS
FOR SYSTEM CLOCK RATES TO 30 MC!**

MC350 SERIES

AS LOW AS \$1.95 IN SMALL QUANTITIES!

Flat Package

- 6 nsec propagation delay typical!
- Fan-out up to 25!
- 0 to +75°C operating range!
- Simultaneous direct and complementary logic functions at each gate!

Motorola's new low-cost, high-speed monolithic integrated circuits in the MECL* (current mode) logic configuration have guaranteed operation over a temperature range from 0 to +75°C. The entire series (types MC352 through MC361) is aimed at commercial computers, manufacturing control equipment, test equipment, instrumentation and other types of gear in which environmental temperature extremes are not a major consideration. For military/space temperature ranges, specify Motorola MC300 Series MECL* circuit types. Will they be in **your** new equipment designs?
